

Aquatrols Corporation-Job Description

Date: May 1, 2018

Role: Grounds Manager

Primary Location: Aquatrols Research Farm-Clayton, NJ

Secondary Location: Aquatrols Main Office-West Deptford, NJ

About the job: This job is primarily an autonomous grounds manager where labor is a significant part of the daily activity. Aquatrols has broken ground on a 10-acre research farm dedicated to product development in Turf and Agriculture. This role will be responsible for maintaining fairway quality turf on 3 cool season and 1 warm season turf plots approximately 1 acre each. There will also be some agriculture plots to maintain though to a lesser degree. Irrigating, planting/seeding, mowing, aerifying, topdressing, and some equipment maintenance will all be part of the weekly routine. Also, product applications, test plot observations, and maintaining plot outlines will be a common need. This individual needs to be comfortable working alone, but also taking some coaching. This would be an ideal role for someone to get an intimate understanding of product development while gaining experience on the physical aspects of grounds maintenance.

Grounds Manager

Primary Responsibilities

- General turf maintenance to include but not be limited to mowing, fertilizing, spraying, topdressing, irrigating and the associated equipment maintenance tasks associate with such maintenance
- Grounds aesthetics-help evolve a 10-acre section of farm land into a research facility that is “tour ready” by the summer of 2020
- Establish and maintain plot areas for both turf and agricultural use

Secondary Responsibilities

- Help define maintenance strategy for the facility
- Develop capital budgets and equipment needs
- Make observations of various test plots
- Work on various projects on grounds and greenhouse at main office location

This individual will help us build this facility from the ground up. We are committed to employee development at Aquatrols and will make sure you get as much exposure as your work ethic can handle. This role could evolve into other roles at Aquatrols such as sales or product development, or if the desire is to move on to more complex or a larger budget maintenance role elsewhere, you have my commitment to help in that process as well. I won't insult you by pretending your next role is not an important factor in choosing this one.

Best regards,
